JVP-100DVR

Stylish Spy Digital Video Recording Pen
USER MANUAL

One of the smallest Digital Video Recorders built into a fully functional ball point pen

This is a stylish JVP-100DVR Gold Clip Model real useable ball point pen. Disguised as a fully working pen, this new and much improved Spy Digital Video Recording Pen is a miniature video camera that is perfect for covert surveillance! It's good for everybody - investigators, doctors, nurses, students, sales staffs, managers, and anyone on the moving job, record conversations, business meetings, interviews, taking direction, lectures, etc… If you need a spy camera that's body mounted, there's nothing easier or more discreet than just putting this pen camcorder in a shirt pocket for a full view of everything you see in front of you.

Featuring full-colour video and sound recording, 4GB of internal memory, which can store up to 12 hours of footage, means that you can start the Spy Pen filming and then forget about it. Just clip it to your pocket and walk around somewhere that you want to film, or leave it in place to record a face to face conversation. If you want to record in an office environment, then you could just leave it in a stationery holder, or position it to look like it's just another pen that's been carelessly left on a desktop.

The Spy Pen unscrews to reveal a cleverly concealed USB connector so that it can be instantly connected to a computer for swift video file transfer. If you're in a tight spot or time is crucial, you could have a covert recording made, then attached to an email or uploaded to the internet within minutes. Perfect for private investigators or undercover journalists the Spy Pen Video Camera is an essential tool for anyone that wants to take surveillance matters into their own hands. You can also use the pen as a normal USB stick – just plug it in and drag and drop your files into it.

Operating the Spy Pen is very simple. At the top of the pen is a small button, which when depressed turns it on and lights a small LED directly opposite the camera. The led shines orange until after a few seconds it begins recording (automatically) which turns the LED blue. To stop recording and save the current video, the button is depressed once more. A quick press restarts recording while turning the pen off completely is achieved by depressing the button for a few seconds.

Features and Specifications:

One of the smallest Digital Video Recorders built into a fully functional ball point pen
Continuous recording until memory is full or manually off
Separate storage folders are used for video and picture modes

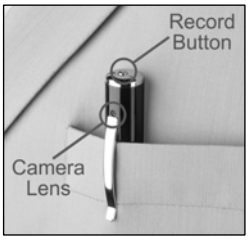
Starting your Digital Video Recording Pen



Step 1:
Press the switch; it begins to record as soon as being turned on. The blue light will turn on during recording.

Step 2:
Press the switch again, it will begin to save data and then turn off, at this time, the status light turns to yellow, reflecting that the camera is at sleeping mode.

Step 3:
If you need to record again, press the switch once more, camera comes back to the recording mode, at the same time, the status light will turn to blue again.

Step 4:
Hold down the switch for 5 sec to turn the power off, the status light should disappear.

Step 5:
When finish charging the battery, the light stops glittering and the yellow light keeps on, this means that battery is fully charged.

Step 6:
It will turn off itself when the battery has been used up. And will save the recorded files before automatically shutting down.

Connect to PC with USB cable

1. Connect the pen to the computer with USB cable. The pen is in the state of charging while the yellow light is twinkling. (You can also directly charge the camera's battery using the supplied wall charger). Charging 2 hours is necessary.

2. It functions as removable disk when connected to the PC. You can playback the video files or photographs stored on the flash drive via the computer. It is a Plug & Play device, drivers are not required. (You may download the VLC media player software from the http://www.videolan.org for free).

Some Notes:

- *If the battery use off suddenly the pen will store the recording video files before it turns off.*
- *Please use "RESET" button then push the on/off switch if the system is halted, so that the pen will work again.*
- *Do not switch "RESET" button when the camera is recording, otherwise the data won't be saved.*
- *In case of formatting the flash drive please use "FAT" file system architecture.*
- *Always perform Safety Remove Hardware on your computer.*

Package:
